

THE INTEGRATED FLEET MANAGEMENT PLATFORM

Optima by Gudz.

Four modules. One ledger. One mobile app. An integrated fleet product built for operators who need to run vehicles, drivers, workshops and rentals without five separate tools.

Fleet Management, Task Management, Workshop Management and Rental Management — wired into a single platform, with a role-based Operations App and a layer of AI Workflows that take the manual work off your team's plate.

COUNTRIES LIVE

Gudz HQ & Gudz Express serving operators across eight countries.

4

MODULES, 1 STACK

Fleet, Task, Workshop, Rental — one ledger, one app.

ABOUT

End-to-end logistics & technology for modern businesses.

Gudz builds execution systems for operators who run fleets and move goods at scale. A SaaS platform sits at the core; a physical execution network wraps around it. One company, two layers — designed so the tech and the tarmac stay in sync.

Optima is the integrated fleet management product from Gudz — the system that taxi fleets, trucking operators, 3W/4W mobility companies, EV fleets and rental platforms use to replace a patchwork of IoT dashboards, spreadsheets and WhatsApp groups with a single operating console.

It ships as four modules — Fleet, Task, Workshop and Rental — plus an Operations App for your on-ground team, and an AI Workflows layer that automates the boring bits so your managers can focus on exceptions. It sits alongside Hyperion, our supply chain stack, inside the Gudz platform.

Built in India

Multi-tenant SaaS

IoT-agnostic

Operations App included

API-first

GUDZ HQ

The SaaS operating platform — Optima for fleets and Hyperion for supply chain. Fleet, task, workshop and rental management, with a role-based Operations App for field teams. This brochure is about Optima.

GUDZ EXPRESS

The physical execution layer — first, middle and last-mile delivery, PTL & FTL freight, and EV logistics on 3W/4W. Runs on top of the Gudz platform.

PLATFORM

One platform. Four modules. One app.

Take the full stack, or enable just the modules you need. Every module shares the same vehicle, driver, customer and asset master — so data never gets re-keyed between systems.

MODULE 01

Fleet Management

The core. Integrate every vehicle on one platform — ditch multiple IoT dashboards and view all your fleet data from a single terminal.

Vehicle Overview QC Audit Alerts
Attendance Operations Payments Assets

MODULE 02

Task Management

Create and assign tasks to users in the company. Tag multiple users to a task so responsibility is shared and visible.

Tasks Multi-assignee

MODULE 03

Workshop Management

Workshop backend for inbound tickets, work orders and part inventory. Technicians pick up tickets, close them with proof of service.

Maintenance Records Work Orders Display
Vehicle Services Parts Inventory

MODULE 04

Rental Management

Rental plans, grace periods, immobilisation, security deposits, renewals and vehicle swaps — linked to Workshop for repair charge-backs.

Plans Deposits Renewals History

LAYER

AI Workflows

Automations that sit across the platform — geofence auto-logging, escalation routing, document expiry alerts, service due notifications, payment runs.

Geofence Auto-log Alert Engine Escalations
Bulk Payments

APP

Operations App

Role-based mobile app for your on-ground team. Administrators assign managerial roles; users execute tasks in the field — QC, tickets, renewals, check-ins.

QC Verification Tickets Renewals
Check-in

MODULE 01

Fleet Management.

Integrate every vehicle on one platform. Ditch multiple IoT dashboards and get access from one terminal — ownership, compliance, challans, driver assignments, asset mapping, service schedule, tyre mapping and maintenance in one place.

SUB-MODULES

Vehicle Inventory

Running / in-service / breakdown / stolen status with downtime & cost summary.

Vehicle QC

QC templates with yes/no responses, photo & video uploads to cloud.

Vehicle Alerts

Insurance, fitness, road tax & service alerts — critical/high/med/low.

Escalations

Email-in dashboard; segregated by customer, employee, driver.

Assets

QR-coded assets mapped to people & vehicles; scan-to-check-in.

Vehicle Overview

Master list — documents, drivers, assignment history, current operations.

Vehicle Verification

Audit via geotagged photo uploads from the Operations App.

Operations

Route templates, driver assignment, geofence-based check-in/out.

Payments

Fixed / variable / hybrid rate cards; bulk payouts; UTR upload.

People Management

Drivers, customers, vendors, employees — KYC verified, with portals.

PROBLEM

- Multiple IoT dashboards; data lives in different tabs
- Docs & challans tracked on WhatsApp & email
- Driver attendance & earnings reconciled on paper
- No single view of vehicle, asset or route status

HOW OPTIMA SOLVES IT

- One terminal for every vehicle and every IoT feed
- Alerts for insurance, fitness, road tax, service due
- Geofence-based route check-in via the Operations App
- Rate-card driven bulk payouts & UTR reconciliation

MODULE 02

Task Management.

A lightweight module that sits alongside Fleet, Workshop and Rental — used to create and assign tasks to users in the company. Every task can be tagged to multiple users so the work is shared and visible.

WHAT IT DOES

Create tasks

Quickly raise a task for anyone in the org, with a clear description.

Multi-assignee

Tag multiple users to a single task so ownership is shared.

Cross-module context

Task lives alongside Fleet, Workshop & Rental context on the same platform.

Visible on the Ops App

Your on-ground team sees assigned tasks inside the Operations App.

WHO IT'S FOR

Fleet Managers

Assign follow-ups & one-off tasks to drivers or supervisors

Workshop Heads

Assign parts runs, audits, inspections to technicians

Ops & HR

Coordinate routine admin across drivers and employees

PROBLEM

- Ad-hoc tasks live on WhatsApp and get lost
- No single place to see "what did I ask whom?"
- Multi-person jobs have no shared owner

HOW OPTIMA SOLVES IT

- One task inbox per user, inside the platform
- Multi-assignee tasks give everyone visibility
- Tasks assigned via the web app surface on the Ops App

MODULE 03

Workshop Management.

A full workshop backend — tickets in, work orders out, technicians close with proof of service. Parts inventory, vehicle services and inventory transfers live in the same module so a supervisor never has to leave the screen.

SUB-MODULES

Maintenance Records

Create tickets, auto-fill chassis & odometer from IoT, assign to technicians.

Issue types & estimates

Tag parts or service needed, see estimated cost with taxes.

Technician workflow

View, close or refer tickets; tag work location; upload proof of service.

Work Orders Display

Workshop heads-up display for live ticket, assignment & status visibility.

Vehicle Services

Upcoming service list; configure recurrence, next date, overdue threshold.

Service Assignment

Assign technicians, workshops or vendors to each service item.

Parts Inventory

Cost code, HSN, taxes, vendor, image; multi-hub stock & activity log.

Issue-to-part mapping

Tag asset issues to parts so techs see the right SKU for each fault.

Parent / Child issues

Issues categorised by vehicle type (2W/3W/4W/6W) with insightful descriptors.

Inventory Transfers

Request, approve & verify inter-hub transfers with a receiving panel.

PROBLEM

- Tickets raised verbally; no paper trail
- Parts stock & costs tracked in spreadsheets
- Service due dates missed until breakdowns happen
- No photo proof of completed work

HOW OPTIMA SOLVES IT

- Ticket → quotation → work → proof-of-service, auditable
- Parts stock, activity log & cost per change per hub
- Service schedules with thresholds & alerts
- Parent/child issues guide techs to the right part

MODULE 04

Rental Management.

Create plans, collect deposits, immobilise on default, swap vehicles and renew — all tied to the vehicle and driver records on the Fleet module. Available as an add-on once the full Fleet stack is live.

WHAT IT DOES

Rental Plans

Daily / Weekly / Monthly / Yearly plans with pickup location mapping.

Active Plan Console

Time left, challans on vehicle, outstanding repair charges, swap option.

Security Deposits

Held amounts per customer; partial or full refunds tracked.

Plan Renewals via OA

Supervisors renew plans from the Operations App.

Grace & Immobilise

Grace period on failed payments; auto immobilisation after cut-off.

Pending Assignments

List of paid customers yet to be handed a vehicle.

Rental History

Full history per asset — every driver, every plan, every deposit.

Workshop Link

Drivers raise tickets, techs review, final repair cost applied to driver.

PROBLEM

- Plan frequencies & grace periods tracked in Excel
- Deposits held off-platform — refunds disputed
- Defaulters kept running; no immobilisation workflow
- Repair costs never charged back to the driver

HOW OPTIMA SOLVES IT

- Configurable plans with cut-off, grace and immobilise
- Deposit ledger with partial & full refund support
- Active console — time left, challans, repair charges
- Workshop tickets close into rental driver accounts

AUTOMATION LAYER

AI Workflows.

A layer of always-on workflows that automate the boring, repetitive parts of fleet operations. They watch events across Fleet, Workshop and Rental — and trigger the next step without waiting on a human. A full 2-page brief exists as a companion document.

Operations**Geofence Auto-log**

When a vehicle enters the customer's destination geofence, the check-in is logged automatically — no punching data into the phone.

Geofence entered → Trip status updated → Report logged

Compliance**Document Expiry Alerts**

Insurance, fitness, road tax and service due dates are monitored; critical/high/medium/low alerts fire before expiry.

Expiry window hit → Alert raised → Owner & admin notified

Support**Email-to-Escalation**

Escalations emailed in are auto-parsed and routed into the dashboard under the right bucket — customer, employee or driver.

Email received → Category detected → Dashboard ticket

Payments**Bulk Payouts**

Rate cards drive driver payouts customer-site-wise; UTR Excel uploads reconcile payments at scale without manual entry.

Trip data → Rate card applied → Bulk payout drafted

Workshop**Service Due Notifications**

Service schedule recurrence & overdue thresholds trigger alerts to the responsible user before a service is missed.

Odometer / date hit → Threshold crossed → Alarm raised

Rental**Auto-Immobilisation**

If a rental payment fails, the grace period runs; on expiry the immobilisation cut-off fires automatically.

Payment failed → Grace elapsed → Vehicle immobilised

MOBILE

Operations App.

Every administrator gets an Operations App. Assign a managerial role to any user and that user can execute assigned tasks from the app — in the field, on their phone, with photo evidence and geotags.

ROLES & WHAT THEY DO

Supervisor

QC forms, vehicle verification, rental plan renewals, task closures.

Technician

View assigned tickets, close or refer, upload proof of service.

Driver

Route check-in/out, raise workshop tickets, attendance.

Auditor

Geotagged vehicle photos for fleet verification & audits.

ACTIONS ON THE APP

Run Vehicle QC — yes/no responses with photo & video uploads to cloud.

Vehicle Verification — geotagged photo upload for fleet audit.

Route updates — arrived / dispatched with optional geofence enforcement.

Work-order closure — mark location, upload proof of service.

Rental plan renewals — supervisors renew on behalf of drivers.

Asset check-in — scan the QR code of mapped assets to confirm custody.

INTEGRATIONS

Plays nicely with the stack you already run.

Optima is IoT- and ERP-agnostic. Bring your telematics, your battery swap network, your payment rails and your OMS — we meet them where they are.

TELEMATICS & IOT

Ajjas

Manitrack

Euler

Roadcast

Intellicar

Loconav

BATTERY NETWORKS

BatterySmart

Mooving

PAYMENTS

Razorpay

ICICI Bank

OMS & COMMERCE

Unicommerce

EasyEcom

Borzo

FirmCompute

Zoho Inventory

One platform, many rails. Telematics feeds light up the Fleet module; battery networks plug into EV fleet operations; Razorpay and ICICI power payouts & collections; OMS connectors keep delivery order flow in sync with vehicle assignment.

GET STARTED

Run your whole fleet on one operating system.

Optima is live across 8 countries, running 15K+ vehicles and orchestrating 50M+ deliveries via Gudz Express.
Pilot in weeks, not quarters.

PILOT AT A GLANCE

Deployment	Cloud SaaS · multi-tenant
Modules	Fleet · Task · Workshop · Rental
Mobile	Operations App · Android & iOS
Automation	AI Workflows layer included
Integrations	Telematics · Battery · Payments · OMS
Setup	Weeks, not quarters

BRING US IN WHEN...

- You're running more than one IoT dashboard.
- Driver payments still move on Excel + UTR emails.
- Workshop tickets, parts & POS live in different files.
- Rental deposits, challans & repairs don't reconcile.
- You need one mobile app for every on-ground role.
